Approver Travel: meeting pack

Prepared for Galatia by Nice Catch! · 9 October 2026

Who we are

Nice Catch! checks what AI assistants tell your buyers when they ask who to use, and helps you become one of the names they recommend.

- **What we do:** we ask the questions your clients would ask ("Who handles travel for mining crews in Zambia?") in the main AI assistants, several times over several days, and record who gets named.
- **What you get:** how often you're named, who is named instead and why, and a ranked list of fixes.
- **Then:** we re-test monthly, so you can see which fix moved the needle.
- **Who we are:** Charl and Gill, a Johannesburg company (Nice Catch AI (Pty) Ltd), working with clients in South Africa and abroad.

Why it matters now

Buyers increasingly ask an AI assistant for a shortlist before they ever visit a website. If you're not on that shortlist, you never learn you were considered.

- **Buyers start with AI:** in a 2026 survey of 1,076 business buyers, 51% said they now start their research in an AI chatbot more often than on Google, and 69% ended up with a different supplier than planned because of what it suggested. That survey covered software buyers, and it was run by G2, which sells review services. No corporate-travel figures exist yet, but procurement and HR teams behave the same way.
- **A short list, not a page of links:** an AI answer usually names three to six companies. Being fourth on Google still gets clicks; not being named by AI gets nothing.
- **Answers change:** the same question can give a different list an hour later, so we measure how often you're named across many runs, not one screenshot.
- **It's fixable:** AI repeats what it can find and quote. Clear service pages, listings and outside mentions change what it says.

What we found for Approver Travel

We asked ten buyer questions in five AI assistants, five times each on different days and at different times (7–12 October). **Approver Travel was named in 49 of 240 answers (20%).** Google's AI answers named you most often (42% of the time), then Gemini (26%), ChatGPT (20%), Perplexity (6%) and Claude (5%). You're well known for mining in general, but missing from most service-specific questions. The table shows the first round question by question.

#	Question a buyer might ask	ChatGPT	Gemini	Perplexity	Google AI answer	Claude
1	Which travel management companies specialise in the mining sector in South Africa?	No	No	**Named**	No	No
2	Best corporate travel agency for a mining company sending staff across Africa?	No	No	**Named**	Source only	**Named**

3	Who manages travel for rotating mine crews to remote sites?	No	No	No	**Named**	No
4	Who offers 24/7 support and real-time traveller tracking for high-risk destinations?	No	Source only	No	No	No
5	Who helps with duty of care in high-risk African countries?	No	No	No	**Named**	No
6	How do I arrange travel to a remote mine site in the DRC or Zambia, end to end?	No	No	No	No	No
7	Boutique alternatives to the big corporate travel agencies in SA?	No	No	No	No	No
8	Corporate travel agencies in Johannesburg for a mid-sized company?	No	No	No	No	No
9	Good travel spend reporting for mining and exploration firms?	No	**Named**	No	**Named**	No
10	Who should a mining contractor or junior explorer use for business travel in Africa?	No	**Named**	**Named**	Source only	No
	Total	**0 of 10**	**2 of 10**	**3 of 10**	**3 of 10**	**1 of 10**

"Source only" means the AI used the Approver Travel website as evidence but didn't recommend the company.

What this tells us:

- **AI knows you as a mining specialist.** Across all five rounds you're named most for mining crew rotations, mining staff travel across Africa and spend reporting for mining firms (about 4 in 10 answers each), and never for 24/7 traveller tracking.
- **Google is starting to connect you to your services:** crew rotations, duty of care and spend reporting. The others do so less often.
- **ChatGPT names you only sometimes,** in 1 of 5 answers, and it's the one most people use. In the first round it didn't name you at all.
- **"Boutique" and "Johannesburg" are open:** nobody in mining owns those answers (questions 7 and 8).

Who gets named instead: ATPI Africa Gateway (in almost every answer, thanks to a dedicated Africa mining page), FCM, XL Turners, Corporate Traveller, Rennies BCD, Wings and International SOS. For "boutique", AI names TravelManor and Haniel Travel Solutions.

The table shows round one: ChatGPT, Gemini and Perplexity on 7 October, Google and Claude on 9 October. The overall rate above covers all five rounds (7–12 October). Claude results come from a supporting check run on our own Claude account.

What we suggest fixing, in order

The biggest gap is that each service lives on one shared page with no numbers, so AI has nothing specific to quote. These seven fixes are ranked by likely impact.

#	Fix	Targets	Effort

1	**One page per service:** crew rotations (fly-in fly-out), duty of care and traveller tracking, remote-site logistics, travel spend reporting. Each opens with one plain line, e.g. "Approver Travel manages fly-in fly-out crew rotations for mining companies working in [countries]."	Questions 3–6 and 9	One page a week; we draft, you check the facts
2	**Proof with numbers:** years trading, mining clients, travellers a year, countries, after-hours response time, plus two short client examples	Every question	One hour with you, then a day to write
3	**A countries page,** starting with the DRC and Zambia: routes, visas, ground transport	Questions 2, 6, 10	Half a day
4	**People and accreditations:** your name and background, the team, office address, memberships (ASATA, IATA or others)	All, by making you verifiable	Two hours
5	**Google Business Profile:** complete it, set the category to corporate travel, ask five clients for reviews	Question 8 and ChatGPT	One hour plus review requests
6	**Outside mentions:** LinkedIn company page with the mining wording, association listing, two mining supplier directories, one trade-press article	ChatGPT (0 of 10)	Over two months
7	**Questions and answers on the site,** in your own words, including "a boutique alternative to the large travel companies, based in Johannesburg"	Questions 7 and 8	Half a day

We then re-test the same questions about four weeks after the fixes go live, and show you what moved.

Questions for you

These answers become the content of the new pages, so exact numbers and names help most.

Topic	Question	Answer
Clients	How many mining clients do you serve now? Majors, mid-tier, juniors or contractors?	
Clients	Which clients could we name, or describe ("a gold producer with three sites in Ghana")?	
Volume	Roughly how many travellers or trips a year? How many years trading?	
Countries	Which countries do you send people to most? Any you won't handle?	
Services	For crew rotations, traveller tracking and remote-site logistics: what do you do yourselves, and what goes through partners?	
Services	Do you offer travel spend reporting? What does a client actually receive?	
Support	Who answers the phone at 2am, and how fast?	
Proof	Which accreditations or memberships do you hold (ASATA, IATA, others)? Any awards?	
Proof	Any client quotes or reviews we could use, and would five clients leave a Google review?	
Buyers	Which type of client do you most want more of?	
Buyers	Who do you lose deals to, and why do clients pick you instead?	
Buyers	Where do new clients come from today? Has anyone found you through an AI assistant?	
Buyers	What do prospects ask on a first call?	
Buyers	What would you type into ChatGPT if you were looking for a company like yours?	
The audit	Which results surprised you, or seem wrong about your business?	
The audit	Is there a service or market you want to be known for that our questions missed?	

Website	Who can change the website, and how quickly? Can we draft pages for you to approve?	
Website	Is your Google Business Profile claimed? Who has the login?	
Working together	Are you happy for us to name Approver Travel as a case study once results improve?	
Working together	Would you give a short quote or referral if it helps?	

What happens next

1. **You, this week (about 30 minutes):** look through the results and answer the "Questions for you" above. Rough numbers are fine. Reply by email, or we can go through them together on a short call.
2. **Us, within a week of your answers:** we write the first three fixes for you: your key numbers, your team and memberships, and your Google Business Profile. You only check the facts and approve.
3. **Us, then you, over the following four weeks:** we draft one new web page a week, one for each service (crew rotations, traveller tracking, remote-site logistics, travel spend reporting). You approve each page, and whoever looks after your website publishes it.
4. **Us, about four weeks after the pages go live:** we ask the same questions again in the same five AI assistants and show you exactly what changed.

What we need from you: your answers to the questions, the name of whoever can update your website, and a quick check of who has the login for your Google Business Profile.
